

Chama App – Product Spec (v1)

Goal

A lightweight, private group tracker for Chamas (savings/investment groups), allowing members to access shared documents, view personal financial statements, and monitor group-wide financial performance.

Platform Stack

- **Backend:** Laravel 11
 - **Admin Panel & UI:** Filament v3
 - **Auth:** Laravel Fortify / Filament Auth
 - **Storage:** Local (configurable S3 later)
 - **Notifications:** Laravel Notifications (email + in-app)
 - **Database:** MySQL/PostgreSQL
-

Assumptions

- The system will support only **one group** (hardcoded for now)
 - Only **invited users** can join the platform
 - Admin is the user who sets up the group
 - Roles and permissions are **group-scoped** (but only one group now)
 - Only authenticated users can access the system
-

Key Modules

1. Membership

Features

- User sign up / sign in / password recovery
 - Admin can:
 - Set up a group (single group instance)
 - Invite members by email
 - Create and assign **roles**
 - Assign **permissions** per role
 - View member list
 - Suspend / remove member accounts
-

2. 📁 Document Management

Features

- CRUD document types (e.g., minutes, contracts)
 - Set **actions** allowed per type (e.g., upload only, view only)
 - Assign **permissions** to document types (role-based)
 - CRUD actual documents (file + metadata)
 - Assign ownership (e.g., uploader or linked user)
-

3. 💰 Financials

Member-facing

- Submit a payment (amount, description, proof as text/image)
- View **own financial statement** (ledger view)
- View **group financial position**

Treasurer-only

- Reconcile submitted payments (approve/reject)

- Record other financial transactions (e.g., expenses, income)
- Tag transactions (type, date, comments)

Reports (auto-generated)

- Balance Sheet
- Cashflow Statement
- Profit & Loss Statement
- Paid-up members list

⚠ Reports should be read-only for now. Use Laravel Excel or DOMPDF for exports.

4. 🛎 Notifications

Features

- Users can opt-in to notifications (email / in-app)
- Users can choose notification **types** (e.g., new document, payment status, report published)
- Admin can send group-wide announcements
- Users can mark notifications as read/unread

📁 Suggested Filament Resources (Per Module)

Module	Resource	Notes
Membership	UserResource, RoleResource, PermissionResource	Use Filament Shield or Spatie
Documents	DocumentTypeResource, DocumentResource	Use FileUpload field
Financials	TransactionResource, StatementResource	Tag-based for income/expense

Module	Resource	Notes
Notifications	NotificationResource	Extend Laravel notifications

Data Models (Simplified)

User

- name, email, password, role_id, status

Role

- name, permissions[]

DocumentType

- name, allowed_actions[], visibility

Document

- type_id, owner_id, file_path, metadata

Transaction

- user_id (nullable), amount, type [income, expense], description, proof (file), status [pending, reconciled]

Statement (read-only, derived)

Notification

- user_id, type, message, read_at

Admin Dashboard (Filament)

- Overview of financials (high-level KPIs)
- Reconciliation queue
- Member list + statuses
- Recent documents

- Send announcement (message + optional attachment)
-

Acceptance Criteria

- Users can self-register (if invited) and log in
 - Admin can invite, manage members, and assign roles
 - Members can upload payment proofs and documents
 - Treasurer can reconcile payments
 - Members can view financial statements
 - System generates basic reports
 - Role-based permissions control access
 - System logs actions (optional for v1)
-

Out of Scope (v1)

- Multiple group support
 - Mobile apps (mobile-first web OK)
 - Advanced accounting (e.g., ledger integrations)
 - Payment gateways
 - Chat or forums
-

Next Steps

1. Scaffold models/resources using Filament
2. Setup roles/permissions via Spatie + Filament Shield
3. Start with:
 - Auth + Membership
 - Documents
 - Financials (with manual data entry)

4. Polish UI, then add notifications
